Embedded Loading Ramp

Embedded loading ramp serve extra operation area for loading and unloading procedure. It is special choice for loading with its strong body and efficient design.

Made in Turkey

All components of mobile ramp have CE or TSE.

Our loading ramps correspond all requirements EU Machinery Directive EEC rules, 93/68/EEC 2006/42/EC and is tested BS EN 1398:2009.

Working level and lip action can be adjusted easily via hydraulic system.

Carrying capacity up to 25000 kg. This is a very important deference our system.

Special designed system demands of customers requirements solve your all problem from small loading to heavy duty applications.

We use galvanised reinforced metal grid as a optional specification, this special system blocked slippery ever conditions .
