

"You can lift the world"

Loading Table Lift

Lift tables and good lifts are used to raise and position materials or a worker in such a way as to supply handling, change the level of goods, reach to height working area or reduce potential injuries in a wide array of industries.

Made in Turkey

Common Features

Complies with ANSI MH 29.1-2003 "Safety Requirements For Industrial Scissor Lifts" and CE marked.

Flow limiting valve at cylinder to arrange speed of system.

Electro-Hydraulic power unit with a maximum pressure device to prevent overload.

Lifts have appropriate device against collapse duty to failure of pipe or power.

All connection mile and pipe is covered bronze material blocking corrosion.

System have Self lubricating bearings on all pivots.

Lifts need less maintenance also have nipple for grease.

Lifts have indicators for easy fluid level identification.

Hydraulic shaft system is made honed pipe and chrome covered steel mile.

Lift is covered with epoxy based paint with colour options.

All Hydraulic hose appropriate to SAE J 517 C-100R.

Self Propelled Personal Lift

System is designed for efficient and ergonomic usage. Side barrier, electric driver or diesel options are satisfy to you any conditions. Self manoeuvring or pulled system supply good ergonomic usage. Electric driver system is so quiet and cost effective solutions at especially sound sensitive area (hotel theatre etc) can be used with easily. Standard system capacity is 350 kg and can be raised up to 9- 16 mt at standard dimensions. Standard product is also cost effective solution.

Efficiency low maintenance safety control options, heavy duty buttons, emergency stop and overload valve to perform the clients best service at big outdoor jobs where platform workspace is critical.

"You can lift the world"

Loading Table Lift

Lift tables are designed to impose proper ergonomic principles into common work functions, at maintenance, industry, school, office, rent and warehousing applications providing economical and easy-to-transport access solution. Unlike the elevators-scissors lift(s) don't occupy any area it can be fixed at pits and smooth surface can be used.

Made in Turkey

Material Lift

Material lifts are designed to change of level goods. Heavy duty and ordinary systems can be supplied working level and load capacity can be changed according to clients requirements. Generally system is fixed on the ground and have removable side barrel and sometimes bottom table is designed rotary properties.

It is compatible with steel materials and system have standard safety properties. System can be used inside or outside of building. Special designed dropped design bottom steel sheets supply safely working every conditions.

Single shaft, multi shaft, tandem lifts and catering-cabin service lifts can be manufactured according to special requirements of clients.

Good Lift

Column type good lifts is cost effective solutions that if you need high level chancing with low capacity. It is cheap and safety solutions to chance level of goods that is not too heavy. Unlike standard elevator system good lifts don't need heavy construction or extra free zone reduced pit requirements (only 14 mm) serve extra convenience at preparing of installing area.

System can be operated between different level and have automation like standard elevator system. Calling- stooping etc also system can be developed special requirments. Swing gate, safety fence and photocell sensors is available.

It is efficiency design with cost effective solutions It help to save your goods and budgets. Like all product good lifts need less maintenance and low spare part cost after sales.

Special Product

If you have problem about elevated of anything at any conditions just contact with us. Our engineer will offer cost effective solutions for your special problem. Our capacity is limited by client's requirements.
